

SKU: 214 HFR40FR

Pressure 4060Psi

Flow 40 L/min

Speed 1450Rp

The high-pressure piston pumps in the HFR series are one of the top-of-the-range products designed and manufactured by the Italian company Leuco. All the pumps packaged by the company from Reggio Emilia are made and designed in Italy. Leuco processes and produces its high-pressure pumps in Reggio Emilia, widely recognised in the sector as one of the most important areas in the world for mechanical industries. The high-pressure pumps in the HFR series are able to operate at very high pressure and at a water temperature of up to 40° .

Specifically, Leuco offers two different models: one of up to 150 bar, and the other 280 bar. The pumps in the HFR series, thanks to the power of the water jet they deliver, are perfect for use in systems for the maintenance of shipyards and industrial construction sites, in systems used to remove old traces of mortar and incrustations, in machines used for cleaning outdoor walls, and roads, in systems chosen for removing paint and varnish from walls and large surfaces.

In addition, in recent years, Hawk pumps have been selected for use in sandblasting systems, used to remove traces of old plaster from the walls of buildings. Thanks to the materials used to produce them and the specialised skills of the workers concerned, Hawk is able to guarantee top-quality pumps. In addition, the company offers its customers a truly excellent, efficient, rapid post-sales service.
